

# Veeva Vault

## Submissions Publishing

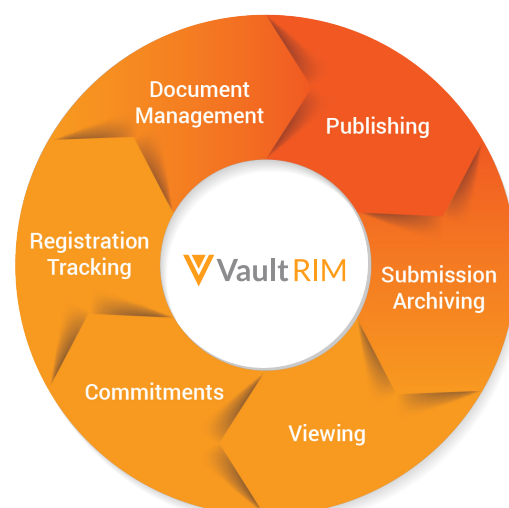

Traditional publishing processes are serial in nature and inherently disjointed. There is a document management system, a publishing tool, and one or more spreadsheets for planning and tracking. Each gap between systems introduces inefficiencies and delays.

Veeva offers a wholly different approach. Veeva Vault Submissions Publishing incorporates publishing capabilities within the Vault RIM Suite to provide a continuous publishing process that dramatically speeds submission delivery.

*Planned for availability in early 2018.*

### Benefits

- **More efficient:** End-to-end submission development within a single system.
- **Fewer steps:** Direct access to the correct document version without manual tracking or transfers.
- **Finish faster:** Publishing steps are completed earlier to minimize late-stage workloads and uncertainty.

End-to-end submission development within the unified Veeva Vault RIM Suite.

### Features

**Submission Independent Hyperlinking** – Create hyperlinks that are independent of the submission structure enabling links to be created earlier, used during document reviews, and reused across multiple submissions.

**Assisted Submission Building** – Eliminate manual steps with rules-based auto-matching of content to your submission outline.

**Background Validation** – Automate validation and link testing with a background service that notifies you of problems as you go.

**Real-time Status Reporting** – Gain complete visibility, from submission status to individual document readiness.

**Multitenant Cloud** – Stay current with health authority guidances and validation criteria with three Vault RIM releases per year.

**eCTD Support** – U.S. and E.U. eCTD formats are targeted for early 2018. Additional formats to follow.
