

NNIT Veeva Powerhouse

Veeva Vault is a cloud-based content management platform and suite of applications that reduce complexity and increase business agility in life sciences companies – and NNIT can help you facilitate the process from strategy and advisory to implementation and application support.

Traditionally, companies have had to deploy separate applications for content and associated data respectively. Veeva Vault is the only unified platform with the unique capability to manage both content and data across clinical, quality, regulatory affairs and soon safety. It allows companies to eliminate system, site, and country silos and streamline their end-to-end processes and data in a unified platform.

But getting the full benefit of the Veeva platform requires proper and strategic planning, carefully executed implementation and due diligence in the continued operations and support.

Strategy and advisory – laying the groundwork for success

Deciding on the right strategy is paramount for your Veeva systems success. NNIT is a highly experienced Veeva Service partner and our team of experts know how to plan an effective and successful implementation of the Veeva Vault applications and the consequential application support – based on your key objectives, the specific services you need and the stakeholders that need to be involved.

On-target Implementation

Implementing Veeva Vault modules is no “plug and play” service. It is essential for your success that every piece of data is migrated correctly, integrations between legacy applications and new application setup, and that your organization is geared for the change. NNIT’s team of Veeva experts is your guarantee for timely project management and thorough product configuration and data migration.

During implementation we focus on your business objectives and business cases and prioritize timely delivery and fulfilment of your expectations – and we always execute in close cooperation with both the client and Veeva.

Manage: Stay ahead with continuous business improvements and reliable support

A successful implementation cannot stand alone. Post implementation NNIT can competently offer Veeva Application Services, allowing you to focus on other business activities. We offer scalability in services to make sure that you harvest the fruits of your unified platform and continuously improve your process by adopting the business and IT functionality introduced in the three releases a year.

To get the full benefit, you need to stay on top of the upgrades and new features. NNIT offer end-to-end services from level 1-3 including functional support. NNIT’s Veeva experts help you with effective and updated operations and support after the implementation phase. We constantly keep track of the new features introduced and their impact on business processes, data and the system and we understand how they affect your platform and needs not just from a technical point of view but also the business impact. With NNIT’s application service you will get access to capacity of a full-service SaaS support function to ensure a reliable platform, and life sciences business experts to assist with giving direction to your continued improvement journey on the Veeva platform.

NNIT **Veeva Vault** services

NNIT has developed a full service catalogue to support Veeva Vault implementation and operations.
