

RIM Implementation Best Practices

1. Leverage established RIM processes and resources

a. Se	elect a tool that evolves with you
П	Choose a solution that's configurable and scalable for future growth
	Map out where your organization is going next
h D	evelop a culture that embraces change
	Evaluate business processes frequently as regulations continue to develop
	Deploy processes that are agile and flexible
	Leverage employee knowledge and activate them as champions
c. Si	tandardize to accelerate across R&D
Ц	Take advantage of authoring templates to ensure consistency across submissioncontent and facilitate submission readiness
Ц	Leverage boilerplate text for faster authoring
Ш	Use submission management and tracking templates to streamline efforts
2 . C	Consider business and technical needs in parallel
a. In	crease communication between business and IT
	Overlap business and technical efforts to minimize re-work
	Establish core team members that understand both existing business processes and what your new tool can do
	Establish over team members that understand both existing business processes and what your new tool our do
b. E	valuate current and future needs
b. E	
b. E	valuate current and future needs
b. E	Involve end users in the design and configuration stages
	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems
	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal
	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system
c. He	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system Highlight what efficiencies and other benefits will be gained
c. Ho	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system Highlight what efficiencies and other benefits will be gained Implement role-based training
c. Ho	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system Highlight what efficiencies and other benefits will be gained Implement role-based training imbrace a hands-on approach
c. Ho	valuate current and future needs Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system Highlight what efficiencies and other benefits will be gained Implement role-based training Embrace a hands-on approach se practice exercises for training and testing
c. He	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system Highlight what efficiencies and other benefits will be gained Implement role-based training imbrace a hands-on approach se practice exercises for training and testing Walk through day-to-day activities in the new system starting on Day 1
c. He	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system Highlight what efficiencies and other benefits will be gained Implement role-based training imbrace a hands-on approach se practice exercises for training and testing Walk through day-to-day activities in the new system starting on Day 1 Re-use exercises for downstream user acceptance testing
3. E a. Us b. Pi	Involve end users in the design and configuration stages Develop a cutover plan and timeline to transition between systems Identify the initial use of your new system and focus on that as the first goal elp your end users understand the value of the new system Highlight what efficiencies and other benefits will be gained Implement role-based training imbrace a hands-on approach se practice exercises for training and testing Walk through day-to-day activities in the new system starting on Day 1 Re-use exercises for downstream user acceptance testing retend you're planning your next submission
