Vault Digital Publishing

Overview

Vault Digital Publishing

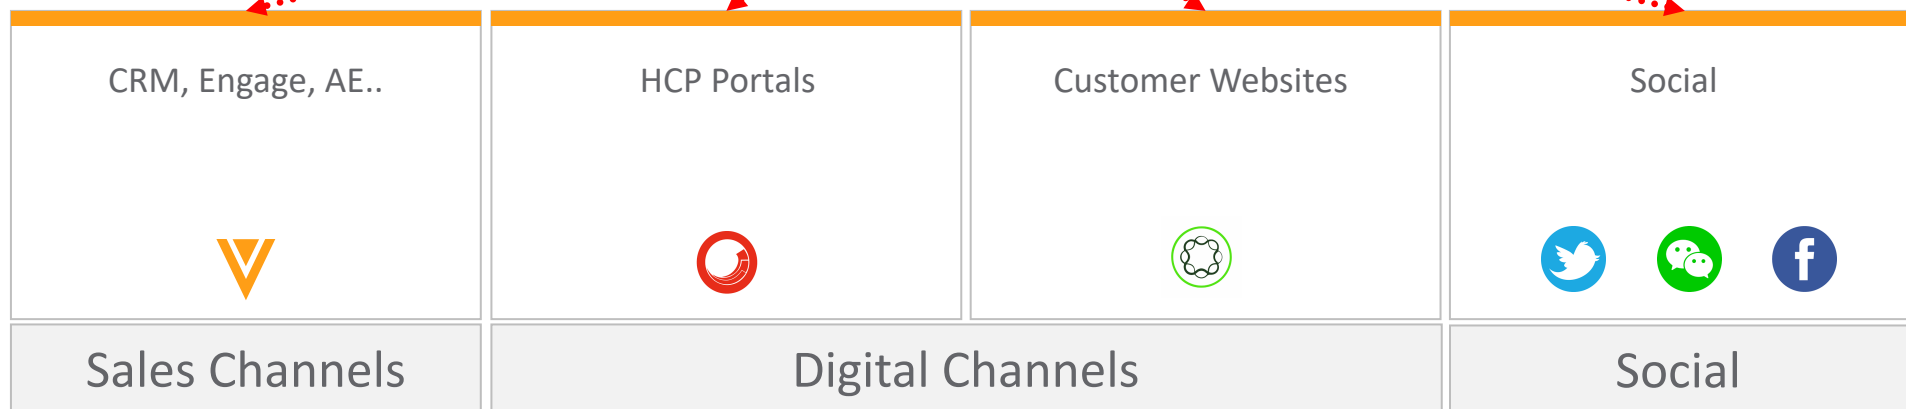

Traditional Content Publishing

Vault PromoMats

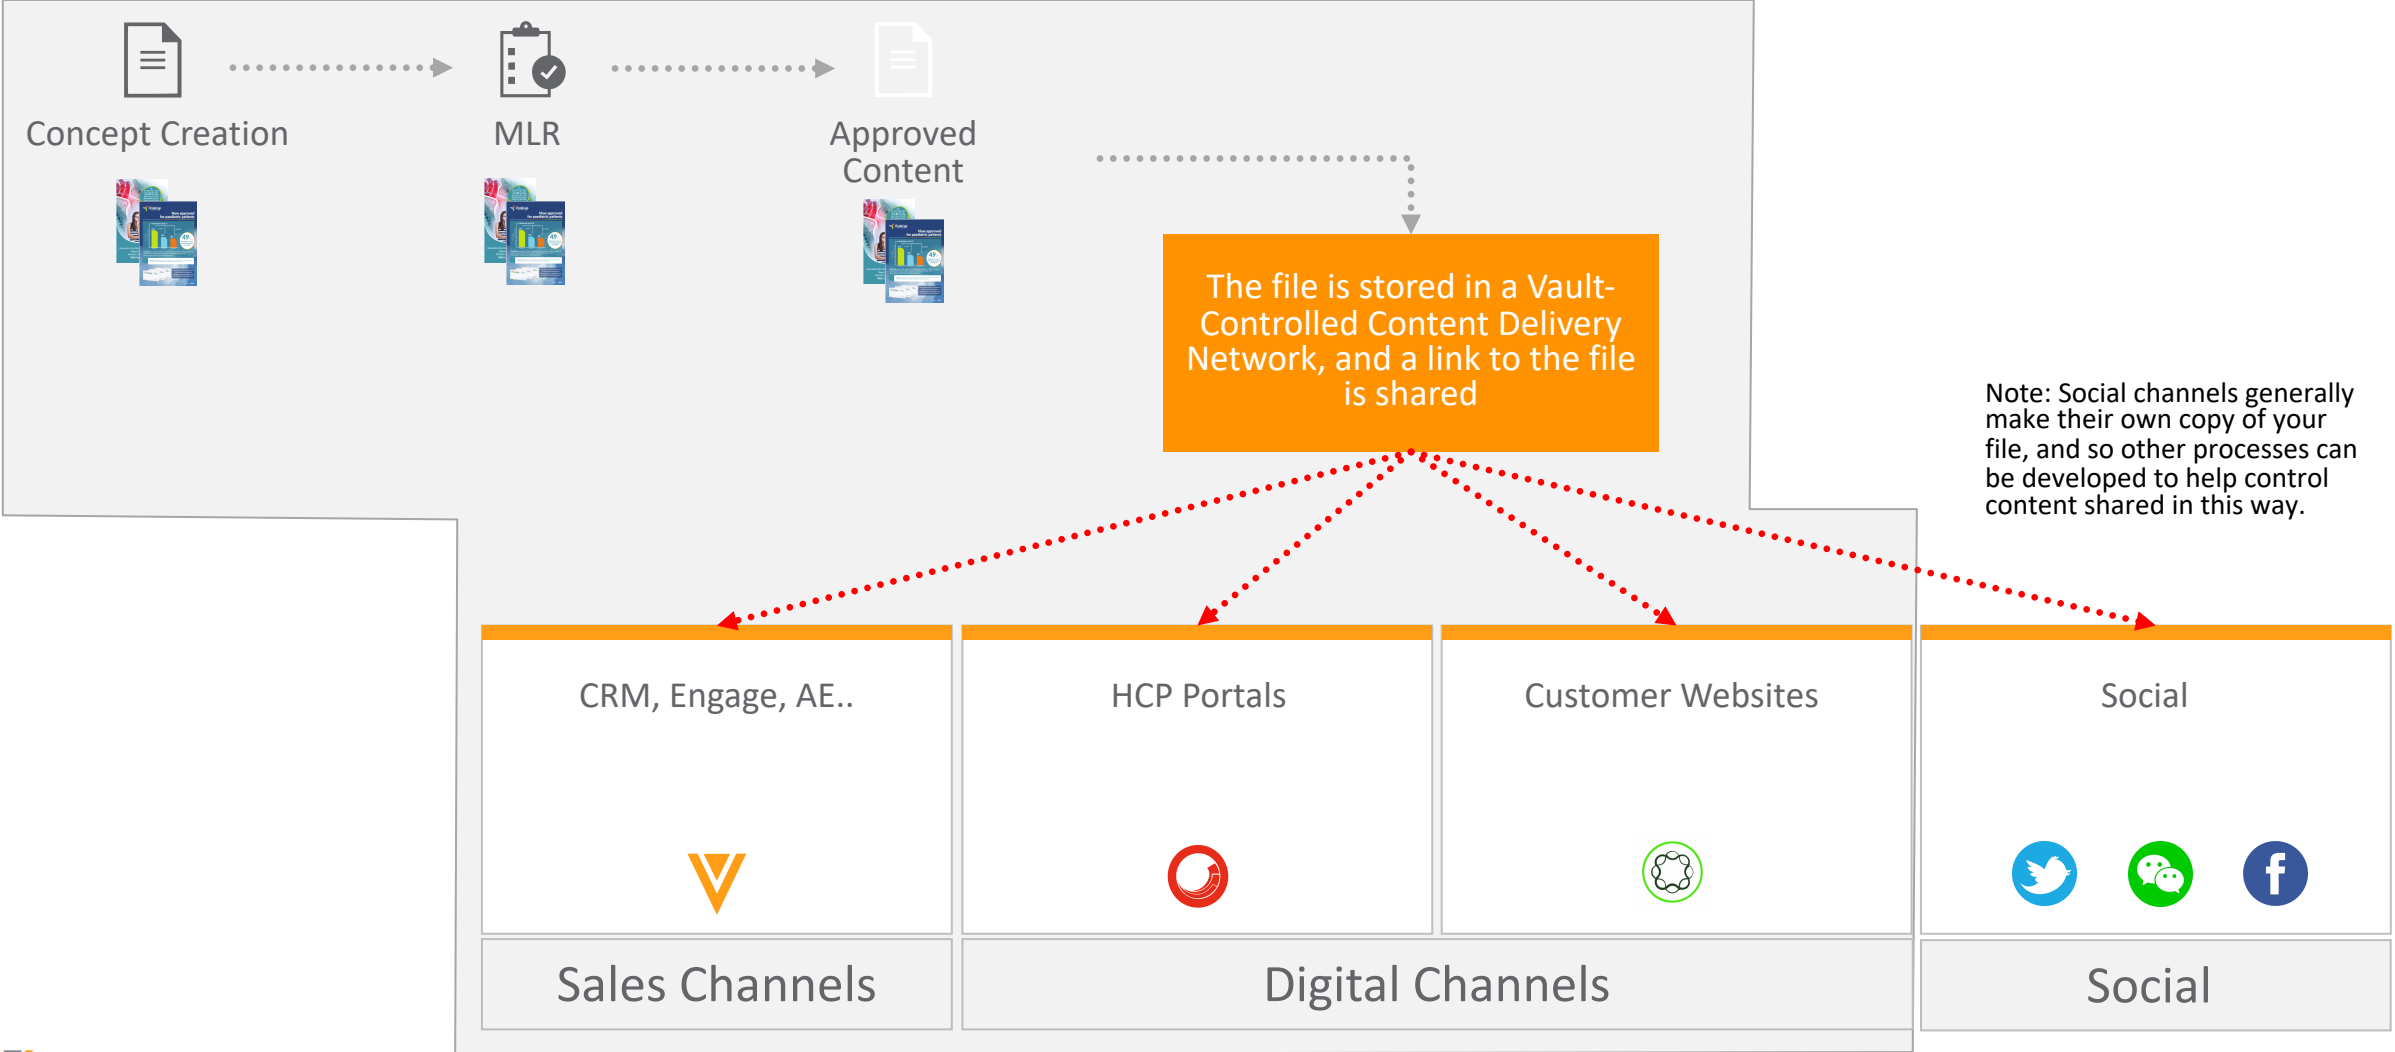

Content is physically removed from PromoMats and loaded into disparate applications

Vault Digital Publishing

Vault PromoMats

Core Capabilities

Automated publishing of source file and renditions

URLs dynamically link to the latest approved content

Automated pull of content upon expiration or withdrawal

Geographical performance and usage tracking

Why You Should Adopt Digital Publishing

Maintains the integrity of your DAM

Optimal content delivery experiences

Enhances compliance

Generates insights

Technical Breakdown

Core AWS Components

Stores documents pushed by Vault as objects

Veeva Canonical ID must have read/write permission to customer buckets

Enables access to an S3 object via a public URL

Must have read access to objects written by Veeva through the Origin Access Identity ID

Provides read access to AWS CloudFront usage logs to Veeva

How Does it Work?

You own subscription to
Amazon CloudFront

- Integration is built
- You manage the setup and own the AWS resources

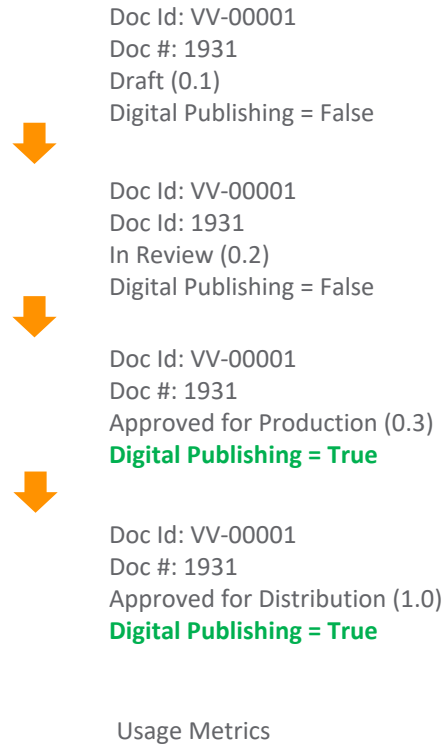

Three buckets

- Production Bucket
- Staging Bucket (optional)
- Log Bucket (optional)

Metadata-based

Veeva AWS Production

Use Case 2 – Managing your website content

- Update individual components on your website (logo, video)
- Content updated automatically when changes are made on PromoMats

DEMO

Use Case

Content Automation

Content Automation

- Digital Publishing can be used to set up Automatic Content Publishing, to achieve this you need to combine it with a connection to the Vault API

- The API connection will provide your site with information such as the status of the file, additional metadata fields such as Name and Description, and the Vault Digital Publishing URL

Publishing to a Production site

API Request: Latest Digital Published Content

API Response: Title/Thumbnail/Link to AWS
