

FOR IMMEDIATE RELEASE

SGS Advances Clinical Trial Data Management with Veeva Vault EDC

Global CRO to use Veeva Vault CDMS for streamlined trial design and improved data quality

BARCELONA, Spain — 7 June 2022 — Veeva Systems (NYSE: VEEV) today announced that SGS Health Science, a leading contract research organization (CRO), has adopted Veeva Vault EDC to improve site data capture and quality for faster study cycle times during clinical trials. The application is part of Veeva Vault CDMS, offering SGS greater data oversight and flexibility in trial design and execution. With Vault EDC, SGS can translate complex protocols into user-friendly casebook designs and make mid-study adjustments with no downtime or migrations.

“SGS is continually evolving its approach to data management to solve the challenges our biotech and pharma customers face in clinical trials,” said Joris De Bondt, head of EDC, SGS Health Science. “With user-friendly features that address today’s complex study needs, Veeva Vault EDC will allow us to better monitor and manage trials leveraging real-time, reliable data from our sites.”

SGS offers global clinical research services for phase I to phase IV trials focusing on early development and biometrics. The addition of Vault EDC builds on SGS’s success streamlining and automating trial processes with Veeva Vault CTMS and Veeva Vault eTMF. Using connected applications on a single cloud platform will deliver greater trial oversight, real-time data and document management, and faster trial processes like payments to research sites. Looking ahead, SGS plans to leverage Veeva RTSM to optimize data quality and trial efficiency.

“We are proud to partner with SGS and support its commitment to advance the speed and efficiency of clinical trials,” said Paul MacDonald, senior director, strategy, Veeva Vault CDMS. “With the addition of Veeva Vault EDC, SGS will strengthen its data oversight and management across their vast network of research sites running clinical trials.”
