

Accelerate IDMP compliance *and simplify reference data management*

The challenges associated with good data governance are universally experienced. Locating and mapping source data is difficult and time consuming, and technology beyond spreadsheets is needed to support team collaboration as processes are stood up and maintained.

The SPORIFY solution transforms reference data management activities by significantly reducing the effort needed to map and match source data with the European Medicines Agency's (EMA) SPOR (substance, product, organization and referentials) data standard. By managing regulatory compliant product data in a central, user-friendly interface, life sciences companies and their partners have everything needed to prepare for IDMP implementation and enable interoperability across systems and geographies.

75%

Estimated efficiency gains and time savings using SPORIFY for initial data preparation and mapping compared to other methods

Source: Top 5 pharma customer case study

Key Benefits

Simplifies reference data management

Significantly reduces time-consuming manual effort needed to locate source data and translate internal controlled vocabularies to SPOR Referentials Management Services (RMS) and Organisation Management Services (OMS).

Central location to achieve IDMP compliance

Prepare and maintain compliant product data through real-time SPOR updates to keep pace with the phased implementation of ISO IDMP standards and regulatory submissions to EMA and national competent health authorities.

Vendor agnostic for easy integration

A vendor-agnostic application that connects via lightweight APIs, SPORIFY is compatible with any RIM system; there's no need to migrate. Developers can use APIs to create internal toolsets and re-use regulatory data across different systems and global regulators.

Increased productivity and time savings

Complete initial data mapping up to 9X faster and utilize automatic synchronization and data maintenance to stay aligned with frequent changes.

Everything you need to prepare for IDMP implementation

Match, maintain, sync and integrate SPOR data

Key Features

EMA SPOR mapping and integration

APIs provide a simple and secure solution to enable mapping, synchronization and notification services between your systems and SPOR master data with a streamlined workflow process.

Data insights delivered via a user-friendly interface.

An extremely user-friendly interface provides color-coded data insights that paint an overall picture of progress on regulatory product master data initiatives, syncing to source systems and providing visibility to the latest SPOR data values.

Automatic data syncing and update notifications

SPORIFY delivers real-time notifications when SPOR is updated for selected data elements of interest. All non-matched terms are automatically matched as they become available, and users are alerted to suggested matches based on the latest updates.

Who uses SPORIFY today?

- Regulators
- Industry
- Project Teams
- Vendors
- Consultants
