

## How it Works

Connecting Veeva RTSM to Veeva CDB allows data extracts from RTSM to be automatically loaded into CDB. These are typically nightly feeds containing:

 **Activity History**

 **Kit Status**

 **Subjects**

These three extracts will contain the standard fields along with any other study specific fields, such as strata variables. The integration is automated, highly flexible and can be adjusted at the study level to accommodate specific data needs.

## Business Benefits

### **Improves visibility and access.**

Allows data management teams to review complete and concurrent data from multiple sources (EDC, RTSM, eCOA, Labs, etc.) in a single system.

### **Facilitates data cleaning.**

Clean clinical data up to 50% faster.

### **Prevents the need to integrate all RTSM data unnecessarily into EDC.**

For example, instead of sending all kit information into EDC this can be managed in CDB, simplifying processes.

Utilizing the Veeva RTSM connections increases quality and efficiency through process optimization and simplifies the user experience, saving time and effort. And when you're connected with Veeva, you get extra value – these connections are included and maintained by Veeva, with no additional license fees.
