- Inventory Management and Procurement

80/20 Rule

80/20 Rule

- Quality Process in a fraction of the time
- What we've learned from our clients is that all companies need the same types of SOPs with standard elements. In fact it's to the tune of 80% standard, while the other 20% is based on a company's risk barometer (risk acceptance vs. risk adverse).
- Start with our standard templates and add 20% of your company's fingerprint via a streamlined review and approval process. Combine the streamlined review and approval process with facilitated training by our experts and within 4-6 weeks you'll have a minimal set of procedures required to maintain a compliant system.
