

FOR IMMEDIATE RELEASE

Global Survey Reveals Majority of Life Sciences Companies Lack Promotional Content Management Capabilities Needed for Compliance

More than three out of four are unable to track where claims and content are in use or can't electronically withdraw outdated content from multiple channels

PLEASANTON, CA — Oct. 27, 2015 — Preliminary findings from the [Veeva 2015 Life Sciences Promotional Content Management Survey](#) uncover significant gaps in the industry's ability to efficiently manage promotional content from creation and review to expiration and withdrawal. The goal of the survey is to chart the progress and identify the impact of moving from paper-based and stand-alone promotional content management processes to automated, end-to-end methods.

Over the past decade, the industry has made great strides transitioning away from paper, but in discrete areas. More than half of respondents (52%) have automated the review and approval portion of their promotional materials management process. Yet, most report that they are missing some, if not all, capabilities fundamental to compliance.

The vast majority (81%) of respondents cannot report on where claims and content are in use, and 77% are unable to withdraw expired or outdated content from multiple channels, even though three out of four say these capabilities would improve compliance (76% and 78%, respectively). Almost half (49%) of respondents do not have primary systems that provide an end-to-end audit trail to manage promotional content throughout its lifecycle, while most report that this capability would improve compliance.

In an effort to bridge these compliance gaps, companies continue to rely on an array of systems – from basic paper-based systems to newer promotional content management systems – to support the full content lifecycle. Most surveyed (88%) say they still rely on multiple systems and methods to manage promotional content, indicating various break points in their promotional materials management process. On average, four systems are in use and 31% of respondents have between five and 20 systems.

However, users of end-to-end solutions that automate processes across the digital supply chain report significantly higher satisfaction with their primary systems. Notably, 100% of those using end-to-end systems report satisfaction with adherence to compliance requirements across channels. Meanwhile, among those not using end-to-end systems, only 54% say they are satisfied with their primary systems. Additionally, 88% of end-to-end system users are also more likely to be satisfied with their ability to electronically withdraw outdated content from multiple channels versus just 62% of all other respondents.

“Companies need greater control of promotional content management processes within a single system,” said John Chinnici, vice president, Veeva Vault PromoMats. “Leading companies are moving to solutions that manage the full promotional content lifecycle, helping them automate every step in an asset's lifecycle, reducing the need for multiple systems and improving compliance at every turn.”

The results of the [Veeva 2015 Life Sciences Promotional Content Management Survey: Preliminary Findings](#) will be presented at the Promotional Review Committee Compliance & Best Practices conference on Tuesday, October 27 at 2:20 p.m. EDT. Conference attendees can also visit Veeva's booth for a copy of the report.
