

Implement Powerful Business Solutions in Record Time

Globalization, agile business environments, and high user expectations are increasing demand on IT departments. IT teams need a platform that accelerates solution development, while reducing the ongoing burden of maintenance, security, and validation of new releases.

With the Veeva Vault Platform, IT teams—and even power users—can rapidly configure a prototype or production-ready business solution with simple point and click. Vault solutions are easily implemented on a proven, cloud-based development platform to manage documents and related data, while automating tasks and processes across the organization. Easy to create dashboards and reports provide visibility into processes and tasks.

Designed for regulated industries, Vault Platform is a unique, multitenant platform for implementing new solutions. In addition to rich compliance functionality, Veeva performs IQ and OQ for each release—accelerating the validation process. Replacing spreadsheets, email, file sharing sites, and legacy content management applications with solutions built on Vault Platform, organizations can quickly gain control of critical content, streamline business processes, and reduce operational overhead.

Key Business Benefits

- **Time to Value:** Quickly configure new solutions to manage critical content and data with simple point and click.
- **Flexible Solutions:** Combining unstructured content and structured data on a single platform enables creation of diverse solutions. Vault's open API enables solutions to seamlessly integrate with other business applications.
- **Faster Validation:** Veeva provides validation documentation for each release including a requirements document, test protocol, IQ/OQ, traceability matrices, and a validation summary report. A sandbox or test environment and user acceptance testing (UAT) scripts are also available and can be adapted for performance qualification (PQ).
- **Cloud Pace of Innovation:** With upgrades 3 times per year, organizations quickly gain access to new capabilities.
- **High Adoption Rate:** Delivering a consumer web experience, Vault is easy to use reducing training costs and driving rapid adoption.
- **Easy External Collaboration:** Easily accessible on any device, from anywhere, enabling secure collaboration across internal and external users.
- **Single Source of Truth:** Create a single source of truth for critical content and share information between Vaults using cross-linking. Users can also manage upcoming or overdue items with a global dashboard of all Vault tasks and workflows.

Veeva Cloud

Deliver highly available, scalable, and secure solutions in the regulated cloud. The Vault Platform is delivered on the Veeva cloud and SOC 1 Type II and ISO 27001 certified global data centers.

Point and Click Configuration

Rapidly implement new solutions without writing code. The intuitive user interface, business logic, and data model are configured using point-and-click browser-based tools.

Consumer Web Interface

Engage end-users with a modern user interface similar to popular consumer websites. The HTML 5 web client provides leading design interactivity, and ease-of-use.

Content Management

Manage documents, videos, and images with rich capabilities including versioning, lifecycles, annotations, renditions, electronic signatures, watermarks, document generation, and sharing. Rule-based configurations support complex business requirements by region or other variables.

Structured Data Management

With the Vault Object Framework (VOF), easily create custom objects to manage business processes and group or categorize information. Flexible data models are quickly configured with simple point and click, or modify common business entities such as product, company, and customer to speed solution development.

Integrated Reporting and Dashboards

Quickly gain data insights with integrated reporting and dashboards to support decision-making. Easily share customizable reports, charts, and dashboards—allowing users to summarize and explore both structured and unstructured data.

Configurable Search

Leverage the VOF to group or categorize content for easier search, and deliver contextually relevant results across both structured and unstructured data.

Workflow

Automate and track business processes with configurable workflows. Provides assignment, routing, email notifications, escalation, and tracking of work items.

Audit Trail

Meet compliance requirements with comprehensive audit support. All developer, administrator, and end user activities are captured in a central and detailed audit trail.

Dynamic Security

Address security challenges of global, regulated enterprises with flexible authorization—once users are authenticated—to support multiple domains and fine-grain access control to functions and data.

APIs

Easily integrate with other systems, migrate data, or automate processing using comprehensive REST APIs.
