

Veeva Vault

Submissions Publishing

Traditional publishing processes are serial in nature and inherently disjointed. There is a document management system, a publishing tool, and one or more spreadsheets for planning and tracking. Each gap between systems introduces inefficiencies and delays.

Veeva offers a wholly different approach. Vault Submissions Publishing incorporates publishing capabilities within the Vault RIM Suite to provide a continuous publishing process that dramatically speeds submission delivery.

Planned for availability in early 2018.

Benefits

- **More efficient:** End-to-end submission development within a single system.
- **Fewer steps:** Direct access to the correct document version without manual tracking or transfers.
- **Finish faster:** Publishing steps are completed earlier to minimize late-stage workloads and uncertainty.

Features

Submission Independent Hyperlinking – Create hyperlinks that are independent of the submission structure enabling links to be created earlier, used during document reviews, and reused across multiple submissions.

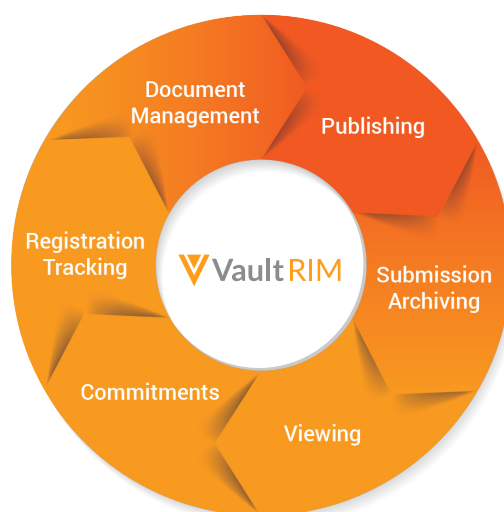

Assisted Submission Building – Eliminate manual steps with rules-based auto-matching of content to your submission outline.

Background Validation – Automate validation and link testing with a background service that notifies you of problems as you go.

Real-time Status Reporting – Gain complete visibility, from submission status to individual document readiness.

Multitenant Cloud – Stay current with health authority guidances and validation criteria with three Vault RIM releases per year.

eCTD Support – U.S. and E.U. eCTD formats are targeted for early 2018. Additional formats to follow.

End-to-end submission development within the unified Vault RIM Suite.
