

Veeva Vault

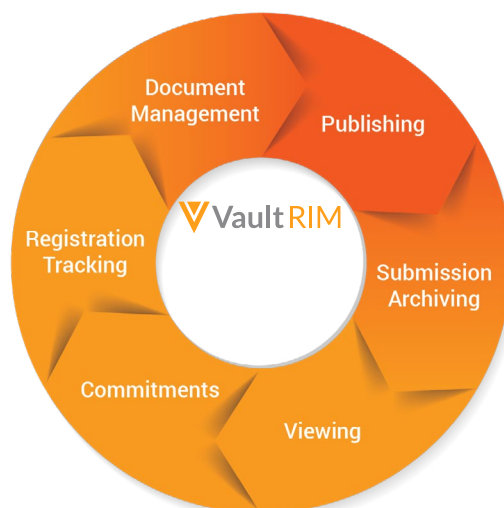

Submissions Publishing

Traditional publishing processes are serial in nature and inherently disjointed. There is a document management system, a publishing tool, and one or more spreadsheets for planning and tracking. Each gap between systems introduces inefficiencies and delays.

Veeva offers a wholly different approach. Veeva Vault Submissions Publishing incorporates publishing capabilities within the Vault RIM Suite to provide a continuous publishing process that dramatically speeds submission delivery.

Benefits

- **More efficient:** End-to-end submission development within a single system.
- **Fewer steps:** Direct access to the correct document version without manual tracking or transfers.
- **Finish faster:** Publishing steps are completed earlier to minimize late-stage workloads and uncertainty.
- **Complete traceability:** Connect published outputs to planning, correspondence, and source documents.

End-to-end submission development within the unified Veeva Vault RIM Suite.

Features

Submission Independent Hyperlinking – Create hyperlinks that are independent of the submission structure enabling links to be created earlier, used during document reviews, and reused across multiple submissions.

Assisted Submission Building – Eliminate manual steps with rules-based auto-matching of content to your submission outline.

Background Validation – Automate validation and link testing with a background service that notifies you of problems as you go.

Real-time Status Reporting – Gain complete visibility, from submission status to individual document readiness.

Gateway Integration – Transfer submissions through health authority gateways, automatically archiving receipts and responses.

eCTD Support – Support for U.S. eCTD. Additional eCTD markets, NeeS, and report-level publishing to follow.
