

Veeva Vault EDC

Vault EDC accelerates study cycle times with faster builds, easy amendments, and intuitive data capture, along with next-generation monitoring and data review. Vault EDC is easily configured for complex, multi-arm adaptive trials and allows mid-study amendments with zero downtime or migrations. It is modern, agile, and fast – dramatically improving the user experience for clinical research sites, monitors, and data managers.

With Vault EDC, companies can design studies more quickly thanks to a modern, drag-and-drop interface. Amendments require zero downtime and no migrations; changes take effect immediately with no interruptions of availability. And role-based views allow CRAs, data managers, and sponsors visibility into their ongoing tasks and current study status at all times.

Vault EDC Data Capture & Monitoring

Benefits

- **Run the study you want.** Vault EDC handles a wide range of trial complexity, including multi-arm adaptive trials, without requiring the use of custom functions.
- **Accelerate study cycle times.** Build studies more easily with a modern user interface and configurable workflows. Amendments no longer require downtime or migrations, speeding up cycle times.
- **Deliver better data, faster.** Perform automated data checks for obvious discrepancies upon data entry, eliminating transcription errors and associated data queries.
- **Part of the Veeva Clinical Suite.** As part of the broader Veeva Clinical Suite, Vault EDC is connected to Veeva CDB and works with Veeva RTSM, Vault CTMS, Vault eTMS, and Vault Study Startup.

Features

Studio Design Environment

Vault EDC offers a visual drag-and-drop study designer that comes with reusable templates and standards library. Innovative features such as dynamic visits and forms, a scripting wizard for edit checks, and self-documenting specs allow studies to be built quickly and efficiently.

Modern Technology for a Better User Experience

Built with the latest cloud technologies, Vault EDC offers a user experience that greatly increases usability, adoption, and performance. Unlike other systems built on 20+ year-old foundations, Vault EDC leverages a modern core architecture to provide flexibility, availability, and convenience beyond traditional EDC systems.

Amendments Without Downtime

Make design changes to active studies easily and with no migrations and no downtimes, even for sites. When new requirements are added, any completed forms are reverted to an incomplete state and the new fields are flagged for site personnel to populate. Read more about Veeva's approach to casebook amendments without migrations.

Real-time & Risk-based UAT

A system-generated Study Differences Report accurately documents all changes between two studies. Real-time updates to the casebook or rules during live, interactive UATs speed up testing by eliminating the delays and back-and-forth in a traditional process.

Local Lab Data

Manage local lab units and reference ranges for all studies in a single, central, easy-to-maintain master list. Update reference ranges once and the new normal values are immediately available for all studies.

Assessments

Make assessments of clinical data, such as serious adverse events, by collecting assessor decisions and other data. Assessors see a limited set of read-only data from the subject's casebook to help inform their decision. Vault stores a snapshot of the supporting data along with the assessment.

Direct Access to Study Data

Direct access to study data and self-serve reports accelerates decision-making by allowing trends and safety signals to be recognized faster. Sponsors can receive real-time dashboards displaying the complete status of their data, regardless of who licenses the EDC system -- the sponsor or their CRO.

Connection to the Vault Clinical Suite

As part of the broader Veeva Vault Clinical Suite, data flows bi-directionally from Vault EDC to various other Veeva applications, including Veeva CDB, Veeva RTSM, Vault Study Startup, and Vault eTMF.

V Vault Clinical

Veeva Vault Clinical is the first eClinical suite offering EDC, clinical database, RTSM, study start-up, eTMF, CTMS, payments, and eConsent on one enterprise-class cloud platform. For the first time, life sciences companies can connect clinical operations and data management with a single platform to create a single source of truth and streamline clinical trials from study startup to close.

Veeva's suite of clinical applications is built on the **Veeva Vault Platform**, the first cloud platform built from the ground up to meet the rigorous usability, scalability, performance, validation, and security requirements of the life sciences industry. With a modern user experience and cloud pace of innovation, Veeva Vault Clinical transforms clinical operations and clinical data management.
