# Veeva Vault RIM

Active Dossier

Increase document visibility throughout the RIM lifecycle

Active Dossier is a list of a sponsor's current and submitted documents across all products and markets. The Vault RIM platform automates the generation and calculation of dossier records based on related submission data. Active Dossier then organizes linked documents into a multi-market document view based on data from the submissions process. This provides comprehensive oversight of the entire lifecycle of dossiers for regulatory authors, stakeholders, and managers in the end-to-end platform.

Benefits

- **Visibility:** Gain a holistic view of documents throughout the RIM lifecycle

- **Focus:** Expedite identification of documents that require updates

- **Single view:** Connect and aggregate data between different submissions and archived data to provide more document context

Features

View documents in multiple markets

- View the current, submitted, and superseded documents side-by-side by country in a single view.
- Filter and save dossier views based on product family, market, or region for quick access to relevant documents in a dossier.

Link to related documents and data

- Reference additional information on each document in the dossier, including the source document, submitted document, and translated document.
- Establish traceability by linking documents to related regulatory records, such as applications and submissions.

Integrate with other submission activities

- Automate generation of the dossier based on the existing regulatory submission process within the Vault RIM Platform.
- Maintain a calculated dossier lifecycle status based on the existing regulatory submission process in Vault RIM.
